

## INNOVATIONS

### MATRIX LINE 150

Certainly not the first kitchen on the market without handles, but a perfected version with generous storage space and great versatility in planning. And of course you can still plan in the Matrix 150 dimension – simple, practical and good!

Matrix Line 150 is an intelligent kitchen – for lovers of good design! Because it does without conventional handles, a Matrix Line 150 kitchen has an extremely tidy and spacious appearance.

### SOFTFORM AND SOFTLINE

Bringing the curves into the kitchen with perfect lines and form. The softness and style curves to your touch in lines and cabinets to create that wow factor with all the function.

### INTERIOR ORGANISATION

Clearly arranged, wonderfully tidy and highly elegant: the interiors of drawers and pull-out units with wenge finish.

From crockery to cutlery, from the wine bottle holder to the knife block. Here you find everything you need!

### COUNTER TOPS

The 16 mm counter tops give a kitchen a new and particularly light and filigree appearance. The counter top is slender and elegant.

Details like these, combined with your own planning ideas, enable you to make every square metre of your kitchen a place to enjoy.

### IRMAXX

This innovation, too, will set trends: With AirMaxx Nolte Küchen together with BASF has brought to market a 50mm worktop which saves 30 percent of the usual weight. This is achieved by the addition of a synthetic polymer. The effect:

More comfort for transport and fitting and high stability at the same time make life a lot easier. AirMaxx is available exclusively from Nolte Küchen in 2009.

### GLASSLINE

GlassLine is the name of the new side extension made from transparent glass which enhances the inside of drawers and pull-outs even more. Stylish in the combination with metal, GlassLine keeps everything in place to both sides without you losing the overview – even if it's a high drawer. And there's even more storage space.

### INTERIOR DECOR

Once again, Nolte Küchen reveals its superiority in innovation. The company has long been producing the backs of the doors in the same decor as the fronts. Now we've gone one step further: carcasses, shelves and wooden components, whether inside or out, are supplied in the same decor.

For the kitchen buyer, this new homogeneous picture adds further value. Once again, Nolte Küchen is setting new standards.

### CHROMLINE

It goes without saying that we have remained faithful to our principle that the value of a Nolte kitchen must also be visible even inside the cabinets in the coming season too.

We have gone one step further with this variation on the trend topic chrome, for this precious material is used for rails to give a sparkling finish to the perfectly organized interior of a drawer or pull-out. Even tall

units can now shine with the same sparkle.

### DRINK CRATE IN PULL-OUT

You are familiar with the problem of tidying up when it comes to storing more bulky items, such as cereal packets or cleaning products, in your kitchen units. Your drinks crate ends up back on the balcony or patio – at least until the first frost.

You will be immediately delighted with the new Nolte Küchen high-capacity pull-out. Its higher side frames and a load-bearing capacity of up to 80 kg with extra-wide pull-outs provide kitchen storage space for everything. Even for drinks crates. The new carcass depth for 75 cm worktops provides an additional 32% storage space. With our ComfortLine organisation system, everything remains neat and tidy with all these storage possibilities.

### COMFORTLINE

The Comfort Line drawer and pull-out system finally does away with wasted storage space, problems of weight and muddle. It can be filled comfortably right to the brim, with no loss of clarity.

This is because a completely organised interior simultaneously guarantees perfect order. Even bulky drink crates now have a sensible place in the large-capacity pull-out drawer.

### SILENT COMFORT

Just imagine the sound in your kitchen when you close a drawer. Now imagine it again – but much more softly. More gently too, since you can close everything elegantly with our Silent Comfort technology.

Doors and pull-outs can also be equipped with this new type of cushioning. At a small surcharge that pays off day after day.

### COOKER UNIT

Where can you actually store the accessories that you need for your cooker, i.e. all the roasting dishes, moulds, pans, saucepans, soufflé moulds, baking sheets and whatever? Maybe in the adjacent unit or the unit above, maybe in the oven itself or somewhere else. But isn't that rather a makeshift storage solution, though? At least, that was what our technicians thought, so one day one of them devised our cooker unit.

Like all good ideas, it is essentially simple. The cooker base unit – to give it its full name – offers you an abundance of storage space directly under your cooker. There is always space for all the baking and roasting utensil in two pull-outs: baking sheet and roasting dish at the top, flat pull-out and moulds and saucepans in the bottom, deeper pull-out.

### SEALED EDGE

Wouldn't we all like less dust and noise in the kitchen? The sealed edge makes that possible, setting completely new standards in everyday kitchen life. The principle is as simple as it is ingenious: the slim seal, made from soft, flexible plastic, runs along the carcass edges and is printed to match the decor.

When the doors and pull-outs are closed, it seals off every remaining air gap between front and carcass in a reliable manner. The inside of the unit remains hygienically clean. It is obvious that the sealed edge is also an advantage from an acoustic point of view, doors and pull-outs close pleasingly quietly.

### GULLWING

Surprisingly new, surprisingly different: like the wings of a seagull, the "Gullwing" elegantly opens its side wings for all those small odds and ends that you normally spend ages looking for. And they close just as gently when the pull-out closes. The kind of technology that could become legendary.

FOR LIVING

### LE MANS

Superior technology that makes use of every last reserve: that is the corner unit LE MANS. The kind of additional space with which to score points with your customers!

A quick right-left double bend as it opens and the pull-out displays its entire contents clearly and within easy reach. LE MANS – the world champion in using the space available.

### PUSH TO OPEN

“Push to open” is the magic formula for lovers of minimalism who prefer to enjoy the modern fronts Nolte Küchen has to offer “pure”. A special mechanism makes it possible:

Doors open and close silently at the soft touch of a finger. Allow the harmonious horizontal lines of Matrix 150 to speak for themselves and open up new creative dimensions for you and your new kitchen – at the turn of a hand.
